MPO Project #16-01

Third Party Quality Control/Quality Assurance of GIS Deliverables from the 2015 Aerial Mapping Update Addendum #1

Procurement questions received as of 04/28/15:

- 1. The '2010 Existing Control Points' shape file shows 5 control points around the city. Were these installed by the previous vendor? And if so, do they plan to use them again, and does the City have data sheets?**

Answer: Those 5 base control points listed in the '2010 Existing Control Points' are from the 1991 Merrick flight. I'm not sure if those are being utilized for base control in this flight. The control points from the 2010 flight can be found in the 2010 Flight Survey Report located on the ftp.

- 2. Is it correct that the shape files named NC_Flight_Areas and NC_LiDAR represent the total extent of the aerial collection for this project, and the shape files named 3_Inch_Imagery_Area and 6_Inch_Imagery_Area represent the areas collected in 2010?**

Answer: The NC_Flight Area and NC_LiDAR are not the total extent. Natrona County decided to piggy back this contract and those are the shapefiles specific to their areas of interest. Yes, the 3 and 6 inch shapefiles reflect the 2010 flight area. This area is also being collected in the 2015 flight. Lastly, there is a small area, ~2 square miles, that was added to the MPO LiDAR collection area located near Bessemer Bend .
