

MPO Project #15-02
Aerial Photography
Supplemental #2

Update:

1. **The 2010_NewControlPoint data depicted in Exhibits E & F and the shapefile uploaded to the Flight Exhibit Shapefiles folder on the ftp site contained errors and was not an accurate representation of the control points acquired during the 2010 flight. To resolve the error the complete 2010 Flight Survey Report, including supplemental data, has been uploaded to the [ftp site](#) and is located in the '2010_Flight_Survey_Report.zip folder'.**

Procurement questions received as of 12/05/14:

2. **Please provide clarification on 'The successful vendor will update the existing features that reside in the centralized SDE database using a methodology that preserves the digital integrity and attribution of the existing data and deliver the updated feature in ESRI and AutoCAD formats compatible with NRGC software and database versions.'**

Answer: Deliverables are to follow the NRGC designed feature schemas (see Exhibit H). However, recommendations for improvements in feature schema design are encouraged. Planimetrics collected in the 2015 flight will replace the 2010 data.

3. **Please provide clarification on what is meant by 'database design' (page 7, section D 3rd paragraph).**

Answer: The vendor is to follow the designed NRGC Enterprise Schema, i.e. adhere to our business rules concerning data standards.
